Report of Independent Auditors

To the Board of Directors of Fortitude Reinsurance Company Ltd.

Opinion

We have audited the accompanying consolidated financial statements of Fortitude Reinsurance Company Ltd. and its subsidiaries (the "Company"), which comprise the consolidated balance sheets as of December 31, 2023 and 2022, and the related consolidated statements of income (loss), of comprehensive income (loss), of changes in shareholder's equity and of cash flows for the years then ended, including the related notes (collectively referred to as the "consolidated financial statements").

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2023 and 2022, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (US GAAS). Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date the consolidated financial statements are available to be issued.

Auditors' Responsibilities for the Audit of the Consolidated Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with US GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery,

intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the consolidated financial statements.

In performing an audit in accordance with US GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit
 procedures that are appropriate in the circumstances, but not for the purpose of expressing an
 opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is
 expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the consolidated financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Required Supplemental Information

Princewaterhouseloopers LLP

Accounting principles generally accepted in the United States of America require that the incurred and cumulative paid loss and allocated loss adjusted expense information for the years ended December 31, 2022 and prior, and the average annual percentage payout of incurred losses by age, net of reinsurance, as of December 31, 2023, on pages 43 - 49 be presented to supplement the basic financial statements. Such information is the responsibility of management and, although not a part of the basic financial statements, is required by the Financial Accounting Standards Board, who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplemental information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the information or provide any assurance.

⁽¹⁾ Balance includes \$619 million of other invested assets transferred into funds withheld arrangements at inception of reinsurance agreements for the year ended December 31, 2023. The Company did not have any assets transferred into funds withheld arrangements at inception of reinsurance arrangements for the year ended December 31, 2022.

1. Nature of Operations, Basis of Presentation and Summary of Significant Accounting Policies

Fortitude Reinsurance Company Ltd., a Bermuda domiciled company, (together with its subsidiaries, "FRL" or the "Company") is primarily a reinsurer of general insurance and life insurance run-off business. FRL is a wholly-owned subsidiary of Fortitude Group Holdings, LLC ("FGH" or the "Parent") and an indirect wholly-owned subsidiary of FGH Parent, L.P. ("FGP" or the "Ultimate Parent").

As of December 31, 2022, FGP was owned by Carlyle FRL, L.P. ("Carlyle FRL"), an investment fund advised by an affiliate of The Carlyle Group Inc. ("Carlyle"), an SEC-registered global investment firm, T&D United Capital Co., Ltd. ("T&D"), a wholly-owned subsidiary of T&D Holdings, Inc., a listed Japanese insurance group, and Corebridge Financial, Inc. ("Corebridge") following its initial public offering, an SEC-registered company, which owned interests in FGP of 71.28%, 25.93% and 2.79%, respectively. On October 2, 2023, a sovereign wealth fund ("SWF") which previously held an indirect interest in FGP through Carlyle FRL, decided to exercise the option to become a direct owner of FGP. As of December 31, 2023, Carlyle FRL, SWF, T&D and Corebridge owned interests in FGP of 38.53%, 32.64%, 26.37% and 2.46% respectively.

Basis of Presentation

The consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States ("U.S.") ("GAAP"). All intercompany transactions have been eliminated. All amounts are presented in U.S. dollars ("USD").

Use of Estimates

The preparation of financial statements requires management to make estimates and assumptions when applying accounting policies that often involve a significant degree of judgment. The Company's accounting policies that are most dependent on the application of estimates and assumptions are those related to the determination of:

- Fair value measurements of investments including, derivatives and the Company's interest in funds withheld;
- Measurement of allowance for credit losses;
- Valuation of future policy benefits liabilities, including additional insurance liabilities ("AIL") for universal lifetype contracts with secondary guarantee features, extent of loss recognition, if applicable and insurance liabilities, at fair value;
- Valuation of embedded derivatives for fixed index annuity ("FIA") products;
- Estimates of unpaid losses and loss adjustment expenses;
- Estimates of the remaining life of the underlying contracts, which is used as the basis for amortizing the value of business acquired ("VOBA"), deferred gains and deferred cost of reinsurance contracts;
- Estimates of the remaining life of the underlying contracts, which is used as the basis for amortizing deferred acquisition costs ("DAC") from long duration reinsurance contracts;
- Estimates of the timing and amount of future cash flows, which is used as a basis for amortizing the
 deferred gains and deferred cost of reinsurance contracts from the short duration reinsurance contracts and
 any related impairment;
- Estimates with respect to income taxes, including the valuation and recoverability of deferred income tax
 assets; and
- Liabilities for legal contingencies, if any.

Additional details regarding these and other estimates and assumptions are included within the significant accounting policies and other related disclosures that follow. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, the Company's consolidated financial condition, results of operations and cash flows could be materially affected.

Business Risks and Uncertainties

The Company's operations are influenced by many factors, including but not limited to, general economic conditions, regulatory changes, market risks normally associated with investments, the financial condition of the cedants and risks impacting insurance liabilities.

The Company is regulated by the Bermuda Monetary Authority ("BMA"). Future changes in regulatory requirements could have an unanticipated impact on the Company.

Liquidity, interest rate, foreign exchange and credit spread risks are all market risks. Liquidity risk is the risk that the Company's financial condition will be adversely affected by the inability or perceived inability to meet short term cash, collateral or other obligations. Interest rate risk can arise from a mismatch in the interest rate exposure of assets compared to liabilities. Changes in interest rates can affect the valuation of fixed maturity securities, financial liabilities, insurance contracts and derivative contracts. Foreign exchange risk can arise from a mismatch in the foreign currency exposure of assets compared to liabilities. Changes in foreign exchange rates can affect the valuation of USD and non-USD denominated assets and liabilities. Credit spreads measure an instrument's risk premium or yield relative to that of a comparable duration, default-free instrument. Changes in credit spreads can affect the valuation of fixed maturity securities, including but not limited to corporate bonds, asset-backed securities, mortgage-backed securities, credit derivatives and derivative credit valuation adjustments.

Market risk is monitored and managed using an asset-liability management framework. For both assets and liabilities, market risk exposures are measured in terms of sensitivities to changes in the relevant risk factors. In addition, the Company performs stress testing on these market risk factors to capture concentration risks to a single market risk factor change as well as simultaneous multiple market risk factor changes, to understand the net impact on exposure from impacts on both assets and liabilities.

The Company's insurance liabilities are exposed to policyholder behavior risk and mortality/longevity risk. Longevity risk is the risk of a change in value of a policy or benefit as a result of actual mortality experience being lower than the expected mortality assumed at the time of underwriting. The Company manages this risk through ongoing monitoring and assessment of such experience relative to underlying assumptions, which include those relative to mortality and morbidity.

Reclassifications

Certain prior period amounts have been reclassified to conform to the current period presentation. The Company reclassified current income tax receivable to other assets on the consolidated balance sheets.

Revision of Prior Period Financial Statements

In conjunction with the preparation of the 2023 financial statements, management identified an error in the 2022 Consolidated Statements of Cash Flows related to the classification of assets acquired as part of a reinsurance transaction. The error was determined to be immaterial. Management has revised the 2022 Consolidated Statement of Cash Flows presented herein. The impact of the revision is shown in the table below:

	Year Ended December 31, 2022					2022
	As		Revision			As
	R	eported	Adjustment			Revised
Adjustments to reconcile net income (loss) to net cash provided by (used in) operating activities:

Supplemental Disclosures of Cash Flow Information						
Non-cash transactions:						
Receipt of securities from funds withheld arrangements	\$	789	\$	(231)	\$	558

Summary of Significant Accounting Policies

The following summarizes the Company's significant accounting policies.

Fair Value Option

The fair value option ("FVO") provides entities with an option to use fair value as the initial and subsequent accounting measurement for assets and liabilities that meet the definition of a financial asset or liability. The decision to elect the FVO is determined on an instrument-by-instrument basis and is applied to an entire instrument. The decision is irrevocable once elected. The Company has made this election for certain investments and insurance liabilities associated with specific reinsurance transactions, as it improves operational efficiency and better aligns the recognition and measurement of those investments and insurance liabilities, with the associated reinsurance activity with how the business is managed. Refer to the investments and policyholder contract deposit section below and Notes 3, 4, 5 and 7 for more information on the Company's FVO elections.

Investments

Funds withheld - directly managed, at fair value: The Company has elected the FVO on the entirety of the funds withheld - directly managed, at fair value portfolio. Funds withheld - directly managed, at fair value represents a reinsurance receivable collateralized by segregated portfolios of investments maintained by the ceding companies. While the investments maintained in the funds withheld - directly managed, at fair value are legally owned by the ceding companies, the investments are separately identified from their general accounts and, pursuant to the contractual terms with those ceding companies, all realized and unrealized gains and losses and net investment income on the investments accrue to the Company. The Company is entitled to all economic rights and obligations on the collateral as if the Company held the investments directly. The Company, therefore, presents funds withheld - directly managed, at fair value within the total investments subheading on the consolidated balance sheets.

The Company reports the net investment income and investment gains (losses) arising from the underlying investments maintained within the funds withheld - directly managed, at fair value account in the same financial statement line that such investment income would have been recorded had the Company elected the FVO.

The change in fair value of funds withheld - directly managed, at fair value excludes the change in fair value of alternative investments collateralizing the funds withheld - directly managed, at fair value, which is recorded within net investment income.

The Company reinsures fixed index annuity contracts which contain features allowing policyholders the option to allocate contract value between a fixed interest rate strategy or an equity market strategy for which interest credited is based on the performance of certain stock market indices. The cedant hedges this risk and provides the benefit of the hedging program to the Company as part of the reinsurance settlement. The Company's participation in the derivative hedging program is reported in funds withheld at fair value, directly managed with unrealized fair value movements reported in change in fair value of funds withheld – directly managed, at fair value within the consolidated statements of income (loss).

Fixed maturity securities available for sale, at fair value: fixed maturity securities designated as available for sale ("AFS") are carried at fair value.

AFS fixed maturity securities are recorded on a trade-date basis, with any unsettled trades recorded in other assets or other liabilities on the consolidated balance sheets. Interest income, including amortization of premium and accretion of discount, is determined using the effective yield method. Interest income amortization of premium, accretion of discount, and prepayment premiums are reported in net investment income in the consolidated statements of income (loss).

Yields on AFS fixed maturity securities are determined based on the fixed maturity type. Premiums and discounts arising from the purchase of bonds are treated as yield adjustments over their estimated holding periods, until maturity, or call date, if applicable. For investments in certain structured securities, recognized yields are updated based on current information regarding the timing and amount of expected undiscounted future cash flows. For high credit quality structured securities, effective yields are recalculated based on actual payments received and updated prepayment expectations, and the amortized cost is adjusted to the amount that would have existed had the new effective yield been applied since acquisition with a corresponding charge or credit to net investment income. For structured securities that are not of high credit quality, the structured securities yields are based on expected cash flows which take into account both expected credit losses and prepayments.

Unrealized gains (losses) and impairment - subsequent to adoption of Financial Instruments - Credit Losses ("CECL") on January 1, 2023: Unrealized gains and losses from AFS fixed maturity securities are reported as a separate component of accumulated other comprehensive income (loss) ("AOCI"), net of deferred income taxes, with changes in credit losses recognized in investment gains (losses).

On a quarterly basis, the Company reviews its AFS fixed maturity securities portfolio to determine whether a decline in fair value below amortized cost (i.e., impairment) of an AFS debt security is due to credit-related or noncredit-related factors. Any impairment that is not credit-related is recognized in other comprehensive income (loss). Credit related impairment is recognized in earnings through a contra-asset allowance account, unless the Company intends to sell before recovery. If the Company intends to sell the debt security, or it is more likely than not the Company will be required to sell the security before recovery of its amortized cost basis, any allowance for credit losses is written off and the amortized cost basis is written down to the debt security's fair value. Accrued interest is excluded from the measurement of the allowance for credit losses.

When determining whether a credit loss exists, the Company estimates the expected credit losses based on a discounted cash flow method, using effective interest rates to discount the expected cash flows associated with each debt security to determine its fair value, which is then compared with its amortized cost basis to derive the credit loss on the security. The methodology and inputs used to determine the credit loss by security type are as follows:

For corporate, municipal and sovereign fixed maturity securities, the Company considers:

- Expected default rates and the timing of such defaults;
- · Loss severity and the timing of any recovery; and
- Scenarios specific to the issuer and the security, which may also include estimates of outcomes of
 corporate restructurings, political and macroeconomic factors, stability and financial strength of the issuer,
 the value of any secondary sources of repayment and the disposition of assets.

For structured fixed maturity securities (e.g., commercial mortgage backed securities ("CMBS"), collateralized debt obligations ("CDO") and asset-backed securities ("ABS")), the Company considers the historical performance of underlying assets and available market information as well as bond-specific structural considerations, such as credit enhancement and the priority of payment structure of the security. In addition, the process of estimating future cash flows includes, but is not limited to, the following critical inputs, which vary by asset class:

- · Current delinquency rates;
- Expected default rates and the timing of such defaults;
- · Loss severity and the timing of any recovery; and
- · Expected prepayment speeds.

Unrealized gains (losses) and impairment - prior to adoption of CECL: Unrealized gains and losses from AFS fixed maturity securities, were reported as a separate component of AOCI, net of deferred income taxes.

On a quarterly basis, the Company reviewed its AFS portfolio for potential other-than-temporary impairments which would require that affected securities be written down to an adjusted cost basis with the amount of the write-down recorded as part of investment gains (losses) in the consolidated statements of income (loss). The Company reviewed its AFS investment portfolio for market value changes to identify changes caused by issuer credit deterioration, changes in market interest rates and changes in economic conditions. If this review indicated a decline in fair value that was other-than-temporary, the Company's carrying amount in the investment would be reduced to its estimated fair value as an other-than-temporary impairment. In accordance with GAAP guidance the estimated credit versus non-credit components of the other-than-temporary impairment would be bifurcated. The credit component would be recorded in earnings and result in the establishment of a new cost basis for the security. The non-credit component would be reclassified as unrealized loss in other comprehensive income (loss). The Company would not recognize impairment of securities due to changing of interest rates or market dislocations unless the Company had the intent to sell the securities prior to recovery or maturity.

The Company considered a number of factors in determining whether the impairment was other-than-temporary. These may have included, but were not limited to: 1) actions taken by rating agencies; 2) default by the issuer; 3) the significance of the decline in fair value; 4) the intent and ability to hold the investment until recovery; 5) the time period during which the decline had occurred; 6) an economic analysis of the issuer's industry; and 7) the financial strength, liquidity, and recoverability of the issuer. Management performed a security-by-security review in evaluating the need for any other-than-temporary impairments. Although no set formula was used in this process, the investment performance, collateral position, and continued viability of the issuer were significant measures considered.

Fixed maturity securities, at fair value: The Company's fixed maturity securities for which the FVO has been elected are reported on the consolidated balance sheets as fixed maturity securities at fair value. Realized and unrealized gains and losses on fixed maturity securities, at fair value are reported in investment gains (losses) on the consolidated statements of income (loss).

Fixed maturity securities at fair value are recorded on a trade-date basis, with any unsettled trades recorded in other assets or other liabilities on the consolidated balance sheets. Interest income, including amortization of premium and accretion of discount, is determined using the effective yield method. Interest income amortization of premium, accretion of discount, and prepayment premiums are reported in net investment income in the consolidated statements of income (loss).

Mortgage loans, at fair value: The Company has elected the FVO on the entirety of the residential mortgage loans portfolio. Realized and unrealized gains and losses on these investments are reported in investment gains (losses) on the consolidated statements of income (loss).

Private equity funds, limited partnerships and limited liability companies ("LPs/LLCs"): LPs/LLCs interests are accounted for using either the equity method of accounting, or at fair value if the Company elects the FVO. LPs/LLCs are recorded within other invested assets on the consolidated balance sheets. The Company uses the net asset value ("NAV"), a permitted practical expedient, as an estimate of fair value when the fair value is not readily available for the Company's LPs/LLCs. In applying the equity method, the Company uses financial information provided by the investee, generally on a one to three-month lag. Contributions to and distributions from these investments are recorded in the period in which the transaction occurred. Changes in fair value of other invested assets are reported in net investment income.

Policy loans: These investments represent funds loaned to policyholders up to the cash surrender value of the associated insurance policies and are carried at the unpaid principal balances due to the Company from the policyholders. Policy loans are recorded within other invested assets on the consolidated balance sheets. Interest income on policy loans is recognized in net investment income at the contract interest rate when earned. Policy loans are fully collateralized by the cash surrender value of the associated insurance policies.

Derivative instruments: Derivatives are financial instruments whose values are derived from interest rates, foreign exchange rates, financial indices, values of securities or commodities, credit spreads, market volatility, expected returns, and liquidity. Values can also be affected by changes in estimates and assumptions, including those related to counterparty behavior and non-performance risk ("NPR") used in valuation models. Derivative financial instruments generally used by the Company include swaps, futures, forwards and options and may be exchange-traded or contracted in the over-the-counter ("OTC") market. Certain of the Company's OTC derivatives are cleared and settled through central clearing counterparties, while others are bilateral contracts between the Company and a counterparty. Derivative positions are carried at fair value, generally by obtaining quoted market prices or a third-party valuation.

The Company uses currency derivatives to reduce exposure to foreign currency associated with assets held or expected to be purchased or sold, and liabilities incurred or expected to be incurred.

The Company's derivatives do not qualify for hedge accounting. Accordingly, all realized and unrealized changes in fair value of derivatives are recorded in investment gains (losses) or foreign exchange gains (losses) on the consolidated statements of income (loss). Cash flows from derivatives are reported in the operating activities section in the consolidated statements of cash flows.

Derivatives are recorded either as assets, within other invested assets, or as liabilities, within derivative liabilities. The Company nets the fair value of all derivative financial instruments on the balance sheet where there is a master netting arrangement that has been executed and if the Company has the right of offset. Cash collateral posted in excess of derivative liabilities and cash collateral received in excess of derivative assets are recorded within other invested assets and accrued and other liabilities, respectively.

Short term investments: These investments primarily consist of highly liquid debt instruments with a maturity of twelve months or less and greater than three months when purchased. These investments are generally carried at fair value and include short term debt securities issued by government sponsored or corporate entities.

Cash and Cash Equivalents

Cash and cash equivalents include cash on hand, amounts due from banks, certain money market investments, funds managed similar to regulated money market funds and other debt instruments with maturities of three months or less when purchased.

Accrued Investment Income

Accrued investment income primarily includes accruals of interest and dividend income from investments that have been earned but not yet received.

Reinsurance

The Company assumes short duration and long duration insurance and investment contracts under funds withheld, coinsurance and modified-coinsurance funds withheld arrangements. The Company follows reinsurance accounting for assumed and ceded transactions that provide indemnification against loss or liability relating to insurance risk (risk transfer). To meet risk transfer requirements, a reinsurance agreement must include both insurance risk consisting of both underwriting and timing risks, and a reasonable possibility of a significant loss. The mortality and timing risks related to certain life blocks of business, such as whole life ("WL"), return of premium ("ROP") term, universal life-type, structured settlements with life contingencies, single premium immediate annuities ("SPIA") with life contingencies, and pension risk transfer annuities with life contingencies were transferred to the Company and are subject to reinsurance accounting. The remaining blocks of life business, such as fixed annuities and structured settlements without life contingencies, lacked significant mortality risks, and thus could not achieve risk transfer.

Accordingly, these reinsured contracts are subject to deposit accounting, rather than reinsurance accounting. The general insurance lines of business qualify to be accounted for as retroactive reinsurance.

Reinsurance payables include unpaid claims which are based upon estimates of payments to be made for claims incurred whether reported or unreported and net settlements due to ceding companies.

Accounting for reinsurance requires the use of assumptions, particularly related to the future performance of the underlying business and the potential impact of counterparty risks. The Company attempts to minimize counterparty risk through the structuring of the terms of the reinsurance agreements, including the use of trusts and the monitoring of credit ratings of the counterparties for signs of declining credit quality.

Deferred Cost of Reinsurance Contracts ("Deferred Costs")

For the reinsurance of existing in-force blocks that transfer significant insurance risk, the excess of the liabilities assumed that exceeds the fair value of assets received is recognized as Deferred Costs at the inception of the reinsurance agreement.

The premium charged, or fair value of assets received, to ceding companies may be lower than the estimate of liabilities as these liabilities may not be settled for many years. As premium is received at inception, the Company expects to generate a profit from these reinsurance contracts as the Company may invest the premium for many years, thereby generating investment income.

Deferred Costs - long duration: The Deferred Costs are amortized over the lives of the reinsured policies in relation to expected benefit payments or insurance in-force for life and annuity insurance contracts. The amortization is included within policyholder benefits within the consolidated statements of income (loss).

The Deferred Costs are included within the net carrying amount of future policy benefit liabilities subject to loss recognition testing, as described in further detail below.

Deferred Costs - short duration: The Deferred Costs are amortized into income over the settlement period of the assumed reserves using an effective interest rate method. In applying the interest method an effective interest rate is derived and locked in for these retroactive reinsurance contracts based on the expected timing and amount of the loss and loss adjustment expense payments such that the present value of these estimated payments equals the consideration received.

Deferred Costs for short duration are assessed for impairment annually on an individual contract basis by determining the rate of return that the Company is required to earn on the invested assets to ensure that all cash flows arising from the assumed liabilities are met in full over the projected remaining payout period. This required rate of return is compared against the modeled rate of return at inception, the forecasted yield and the actual inception-to-date rate of return in order to identify indicators that would lead the Company to record an impairment of the Deferred Costs. If an asset is deemed to be impaired it is written down within that reporting period, with the adjustment recorded within policyholder benefits and losses incurred within the consolidated statements of income (loss). During the year ended December 31, 2023, there was a \$2 million additional impairment recorded on a reinsurance contract executed in 2022. During the year ended December 31, 2022 the Company identified two reinsurance contracts requiring impairment. Refer to Note 8 for further discussion on the impairment recorded.

The Company performs periodic tests, including at issuance, to determine if the deferred costs are recoverable. If the Company determines that the deferred costs are not recoverable, the Company records a cumulative charge to the current period.

Funds Withheld by Ceding Companies

Funds withheld by ceding companies represent funds that have been retained by ceding companies where the Company receives a fixed crediting rate, which is reported in net investment income. Funds withheld by ceding companies are carried at cost less paid losses plus accrued interest.

Other Assets

Other assets primarily consist of other investment-related receivables, receivables from related parties, DAC and current income tax receivable.

DAC: DAC represents the deferred costs that are directly related to the successful acquisition or renewal of an insurance (or reinsurance) contract and is included in other assets on the consolidated balance sheets. Each cost is analyzed to assess whether it is fully deferrable. If deferrable, these costs have been recorded as an asset.

DAC related to investment contracts with significant revenue streams from sources other than investment of the policyholder funds are amortized over the lives of the policies, based upon the proportion of the present value of actual and expected deferred costs to the present value of actual and expected gross profits to be earned over the life of the policies.

For the year ended December 31, 2023, the Company recorded a DAC deferral of \$23 million due to a new reinsurance agreement as discussed further in Note 2. The Company did not have any DAC for the year ended December 31, 2022.

Future Policy Benefits

Future policy benefits include retirement products whose payments depend on contract holder's survival such as structured settlements with life contingencies, SPIA with life contingencies, and pension risk transfer annuities; traditional life insurance products such as WL and RoP term, accident & health ("A&H") and long term care ("LTC"); and the additional insurance liability associated with universal life-type contracts with secondary guarantees.

The assumptions used to estimate benefit liabilities are set when a contract is issued and do not change with changes in actual experience unless a loss recognition event occurs. These locked-in assumptions include mortality, morbidity, persistency, maintenance expenses, and investment returns and include margins for adverse deviation to reflect uncertainty given that actual experience might deviate from these assumptions. Periodically, the Company is required to evaluate these locked-in assumptions. A loss recognition event occurs when there is a shortfall between the net carrying amount of future policy benefit liabilities and estimated future policy benefit liabilities determined by applying current best estimate assumptions. The Company includes Deferred Costs, VOBA and deferred gains in the net carrying amount of future policy benefit liabilities subject to loss recognition testing. If the Company determines a loss recognition event has occurred, the Company would record additional liabilities through policyholder benefits in the consolidated statements of income (loss). To the extent that a loss recognition event is triggered by decreased interest rates stemming from assets designated as available for sale, the increase of additional liability would be recorded as a component of accumulated other comprehensive income (loss). The Company would then replace the old locked-in assumption with the current best estimate. Future reserves would be set by reviewing the updated best estimate assumptions periodically and making further adjustments where necessary. Other adjustments include unearned premium liabilities, incurred but not reported claims, and disabled lives reserves where A&H products such as disability income have claimants receiving ongoing benefits. Groupings for loss recognition testing are consistent with the Company's manner of acquiring servicing and measuring the profitability of the business and applied by line of business.

Policyholder Contract Deposits

The liability for policyholder contract deposits is recorded at accumulated or fund value (deposits received, plus accrued interest credited, less withdrawals, surrender charges and fees). Amounts collected on investment-oriented products are not recognized as revenues, because they are recorded directly to policyholder contract deposits upon receipt.

Policyholder contract deposits are primarily comprised of deferred annuities, FIA and annuities issued in structured settlement arrangements, SPIA, contracts with no life contingent features and the fund value component of universal life-type contracts and universal life-type contracts with secondary guarantee. The liability for the non-life contingent payout products represents an estimate of the present value of future benefits using an interest rate determined at the treaty inception date.

FIA's have a fund value that accumulates interest based on either a fixed guaranteed crediting rate or the performance of equity market indices based upon the policyholder's election. The equity market option is an embedded derivative. The combined reserve for the FIA products, contained within policyholder contract deposits, is comprised of: (1) the account value related to the fixed crediting rate funds; (2) the host contract, which is the non-variable guaranteed minimum contract value; and (3) the fair value of the embedded derivative which represents the present value of cash flows attributable to the hedged strategies.

The embedded derivative cash flows are discounted at a rate that reflects the Company's own credit risk. Changes in the fair value of the embedded derivative are recorded in investments gains and loss in the consolidated statement of income (loss). The host contract is established as the account value less the embedded derivative and is accreted over the underlying's products life.

For universal life-type and universal life-type contracts with secondary guarantees that are determined to have profits in earlier years and losses in subsequent years from the insurance benefits, an additional insurance liability is established in addition to the fund value to recognize the portion of amounts assessed against the contract holder (costs of insurance and all other charges and margins) that compensates the Company for benefits to be provided in future periods.

Unpaid Losses and Loss Adjustment Expenses

The unpaid losses and loss adjustment expenses represents estimates of unpaid claims, including estimates for claims incurred but not reported ("IBNR") and loss adjustment expenses ("LAE"), less applicable discount. The Company regularly reviews and updates the methods used to determine loss reserve estimates. Because these estimates are subject to the outcome of future events, changes in estimates are common given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate loss and loss adjustment expenses are referred to as unfavorable or adverse development. Reserve changes that decrease previous estimates of ultimate loss and loss adjustment expenses are referred to as favorable development. Prior year development can refer to either favorable or unfavorable development.

Discounting of loss reserves: The Company discounts total workers' compensation liabilities using a discount rate calculated from the U.S. Treasury rates plus a liquidity premium, along with the use of payout patterns specific to primary and excess workers' compensation portfolios. The Company locks in this discount rate at the inception of the contract, and no periodic updates are made. The locked in discount rate on the Company's current workers' compensation portfolio is 2.31%.

Collateral Deposit Liability

The Company has contractually assumed certain environmental protection plan ("EPP") and clean-up cost cap ("CCC") exposures. EPP and CCC products are designed to incorporate elements of program funding (investment risk on EPP) along with cost overrun protection (insurance risk on CCC) for the remediation of known environmental contamination issues.

The Company recognizes proceeds received under EPP programs as a collateral deposit liability, given insurance risk is not transferred under such funding programs. As losses funded by the policyholder are paid, the collateral deposit liability is reduced and as interest, estimated by applying the effective yield method, is accrued, the collateral deposit liability is increased.

Value of Business Acquired ("VOBA") and Deferred Gain from Reinsurance Contracts

VOBA: The VOBA intangible liability represents the difference between estimated fair value of future best estimate liability cash flows and the Company's liability for future policyholder benefits and contract deposits after adjusting for current assumptions measured on the acquisition date.

This VOBA liability is amortized over the lives of the reinsured policies of up to 70 years, in relation to expected benefit payments or insurance in-force amounts for insurance contracts. The amortization is included within policyholder benefits within the consolidated statements of income (loss).

Deferred gain - long duration: The difference between the consideration received in excess of the liabilities assumed under the reinsurance contract is recorded as a deferred gain from reinsurance contracts in the consolidated balance sheets. The deferred gain is amortized over the lives of the reinsured policies in relation to expected benefit payments or insurance in-force for life insurance contracts. The amortization is included within policyholder benefits within the consolidated statements of income (loss).

Deferred gain - short duration: Retroactive reinsurance contracts provide indemnification with respect to past loss events. For these contracts, the difference between the consideration received in excess of the liabilities assumed under the reinsurance contract is recorded as a deferred gain from reinsurance contracts in the consolidated balance sheets. The deferred gain is amortized into income over the settlement period of the assumed reserves using an effective interest rate method. In applying the interest method an effective interest rate is derived and locked in for these retroactive reinsurance contracts based on the expected timing and amount of the loss and loss adjustment expense payments such that the present value of these estimated payments equals the consideration received.

The Company monitors subsequent development on losses that occur during the retroactive period and revises the deferred gain balance on a cumulative basis, as applicable. The revised deferred gain balance is determined using the retrospective method so that the adjusted balance reflects the amount that would have existed had the revised estimates been available at the inception of the reinsurance transactions. The amortization, including any catch up adjustment recorded during the period of change, is included within policyholder benefits within the consolidated statements of income (loss).

Repurchase Agreements

Proceeds from securities sold under repurchase agreements are recorded as liabilities and are used primarily to invest in higher yielding assets. As part of securities repurchase agreements, the Company transfers securities to a third-party and receives cash as collateral.

Securities repurchase and resale agreements that satisfy certain criteria are treated as secured borrowing or secured lending arrangements. These agreements are carried at the amounts at which the securities will be subsequently resold or reacquired, as specified in the respective transactions. For securities purchased under agreements to resell, the Company's policy is to take possession or control of the securities either directly or through a third-party custodian. These securities are valued daily and additional securities or cash collateral is received, or returned, when appropriate to protect against credit exposure. Securities to be resold are the same, or substantially the same, as the securities received. The majority of these transactions are with large brokerage firms and large banks. For securities sold under repurchase agreements, the market value of the securities to be repurchased is monitored, and additional collateral is obtained where appropriate, to protect against credit exposure. The Company obtains collateral in an amount at least equal to 105% of the fair value of the securities sold. Securities to be repurchased are the same, or substantially the same, as those sold. The majority of these transactions are with highly rated financial institutions. Income and expenses related to these transactions executed within the insurance companies used to earn spread income are reported as net investment income. The Company did not have any repurchase agreements outstanding at December 31, 2023.

Other Liabilities

Other liabilities primarily consist of due and unpaid claim liabilities, payables to related parties, current income tax payable, deferred income tax payable, accrued expenses and payables resulting from purchases of securities that had not yet settled at the balance sheet date.

Income Taxes

The Company operates as a corporation for U.S. federal income tax purposes and also owns several subsidiaries that are subject to U.S. federal and state income tax and, as such, the related tax provision attributable to these operations is reflected in the consolidated statements of comprehensive income (loss).

The income tax provision is calculated under the asset and liability method. The Company recognizes deferred income tax assets and liabilities for the expected future tax effects attributable to temporary differences between the

financial statement and tax return basis of assets and liabilities based on enacted tax rates and other provisions of the tax law.

Deferred tax assets and liabilities are recognized for the timing differences between the financial statement carrying amounts of existing assets and liabilities and the respective tax basis at the balance sheet date. Deferred tax assets and liabilities are measured using the enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. Valuation allowances are established when necessary to reduce deferred tax assets to an amount that in management's opinion, is more likely than not to be realized.

The Company evaluates the recoverability of deferred tax assets and establishes a valuation allowance, if necessary, to reduce the deferred tax asset to an amount that is more likely than not to be realized (a likelihood of more than 50%). The evaluation of the recoverability of the deferred tax asset and the need for a valuation allowance requires the Company to weigh all positive and negative evidence to reach a conclusion that it is more likely than not that all or some portion of the deferred tax asset will not be realized.

Insurance Revenue and Expense Recognition

Premiums for short-duration contracts are recorded as written on the inception date of the policy. For short-duration insurance contracts, premiums are generally earned on a pro-rata basis over the terms of the related policies. For traditional long-duration insurance contracts (including term and WL contracts and certain annuities), premiums are earned when due. Estimates for premiums due but not yet collected are accrued. For annuities and structured settlements without significant mortality or morbidity risk (investment contracts) and universal life-type contracts (long-duration contracts with terms that are not fixed or guaranteed), premiums received are reported as policyholder contract deposits. Revenues from these contracts are reflected in policy charges and fee income consisting primarily of fees assessed against the policyholders' account balances for policy administration charges and surrender charges. Policy charges are recognized as revenues in the period in which they are assessed against policyholders, unless the charges are designed to compensate the Company for the services to be provided in the future, in which case they are deferred.

Foreign Exchange Gains (Losses)

Financial statement accounts expressed in foreign currencies are translated into USD generally using rates of exchange prevailing at the balance sheet date and the related translation adjustments are recorded as a separate component of other comprehensive income (loss), net of any related taxes. Functional currencies are generally the currencies of the local operating environment. Other foreign currency assets and liabilities that are considered monetary items are translated at exchange rates in effect at the balance sheet date. Foreign currency revenues and expenses are translated either at transaction date exchange rates or using a weighted average exchange rate for the reporting period. These exchange gains and losses are recognized in foreign exchange gains (losses) within the consolidated statements of income (loss).

Statement of Cash Flows Presentation of Funds Withheld - Directly Managed

Withdrawals from funds withheld - directly managed reinsurance arrangements are based on statutory levels of the associated assets and liabilities. The excess (shortfall) under these agreements is settled on a periodic basis and can be settled in either cash or securities depending on the specific reinsurance agreement. The portion settled in cash is reflected in cash from operations with the securities portion being reflected as a non-cash transaction. The Company presents activity within funds withheld - directly managed as well as activities related to the reinsurance arrangements as operating cash flows.

Accounting Standard Updates ("ASUs") Adopted During 2023

ASU 2020-03 Codification Improvements to Financial Instruments:

In March 2020, the FASB issued ASU 2020-03 which makes narrow-scope improvements to various topics within the codification relating to financial instruments, inclusive of the new credit losses standard as described below. The amendments related to certain specific issues covered by the ASU were effective immediately upon the issuance of the ASU, and had no impact on the Company's consolidated financial statements and disclosures.

ASUs 2016-13, 2018-19, 2019-04, 2019-05, 2019-10, 2019-11, 2020-02 Financial Instruments - Credit Losses - Measurement of Credit Losses on Financial Instruments:

In June 2016, the FASB issued an accounting standard that introduced a new credit loss methodology, the Current Expected Credit Losses ("CECL") methodology, which requires earlier recognition of credit losses while also providing additional transparency about credit risk. The CECL methodology utilizes a lifetime "expected credit loss" measurement objective for the recognition of credit losses for loans, reinsurance receivables, and other financial assets measured at amortized cost. The allowance for credit losses is adjusted each period for changes in expected lifetime credit losses. The CECL methodology represents a significant change from prior U.S. GAAP and replaced the prior multiple existing impairment methods, which generally required that a loss be incurred before it was recognized. For AFS debt securities, if the fair value is less than cost and the Company intends to hold the security or it is more-likely-than-not that the Company will not be required to sell the security, the Company will record any applicable credit-related impairment through an allowance for credit losses and adjust subsequent periods for changes in credit risk.

On January 1, 2023, the Company adopted the new standard and completed implementation of its updated CECL models, processes and controls related to the identified financial assets that fall within the scope of the new standard. Upon adoption, the Company recorded a cumulative effect adjustment to reduce the opening retained earnings balance by approximately (\$35) million, on a post-tax basis. Results for the year ended December 31, 2023 are presented under ASU 2016-13 while prior period amounts continue to be reported in accordance with previously applicable U.S. GAAP. See Note 4 for additional disclosures related to CECL.

Future Adoption of Accounting Standard Updates

ASU 2018-12 Targeted Improvements to the Accounting for Long-Duration Contracts and ASU 2020-11 Effective Date and Early Application:

In August 2018, the FASB issued ASU 2018-12, an accounting standard update with the objective of making targeted improvements to the existing recognition, measurement, presentation, and disclosure requirements for long-duration insurance contracts issued by an insurance entity. In November 2019, the FASB issued ASU 2019-09, an amendment to ASU 2018-12 extending the effective date of ASU 2018-12 for all entities, which extends the effective date of ASU 2018-12 to January 1, 2025 for the Company.

The changes to the measurement, recognition, presentation and disclosure as provided by the new accounting standard update are summarized below:

- Requires the review and update of future policy benefit assumptions at least annually for traditional and limited pay long duration contracts, with the recognition and separate presentation of any resulting remeasurement gain or loss (except for discount rate changes as noted below) in the consolidated statements of income (loss);
- Requires the discount rate assumption to be updated at the end of each reporting period using an upper medium grade (low-credit risk) fixed income instrument yield that maximizes the use of observable market inputs and recognizes the impact of changes to discount rates in other comprehensive income (loss);
- Requires the measurement of all market risk benefits associated with deposit (or account balance)
 contracts at fair value through the income statement with the exception of instrument-specific credit risk
 changes, which will be recognized in other comprehensive income (loss);
- Requires the amortization of DAC and other DAC-like assets over the expected term of the related contracts on a constant-level basis; and
- Requires significant disclosures, including disclosures of disaggregated roll-forwards of policy benefits, account balances, market risk benefits, separate account liabilities and information about significant inputs, judgments and methods used in measurement and changes thereto and impact of those changes.

ASU 2018-12 permits two adoption methods for the liability for future policy benefits and DAC: (1) a modified retrospective transition method in which the guidance is applied to contracts in force as of the beginning of the earliest period presented on the basis of their existing carrying amounts, adjusted for the removal of any related amounts in AOCI; or, (2) a full retrospective transition method. The Company will adopt ASU 2018-12 effective January 1, 2025 using the modified retrospective transition method where permitted, and apply the guidance as of January 1, 2023 (and record transition adjustments as of January 1, 2023) in the Company's 2025 consolidated financial statements.

The Company has created a governance framework and a plan to support implementation of the updated standard. The Company continues to make progress in its implementation process that includes, but is not limited to, refining significant accounting policy decisions, employing appropriate internal controls, modifying actuarial models and systems, revising reporting processes and developing informative qualitative and quantitative disclosures.

The Company expects that while the adoption of this new accounting guidance will have a significant impact on the Company's consolidated financial statements under U.S. GAAP, it does not expect adoption of the updated standard to impact its overall cash flows, subsidiaries' dividend capacity or their ability to meet applicable regulatory capital standards, nor does the Company anticipate adoption to affect its existing debt covenants or strategies for capital deployment.

ASU 2023-01, Leases (Topic 842): Common Control Arrangements

In March 2023, the FASB issued ASU 2023-01, *Leases (Topic 842) Common Control Arrangements*. This ASU provides guidance in ASC Topic 842 that leasehold improvements associated with common control leases should be: (i) amortized by the lessee over the useful life of the leasehold improvements to the common control group, regardless of the lease term, as long as the lessee controls the use of the underlying asset through a lease; and (ii) accounted for as a transfer between entities under common control through an adjustment to equity if and when the lessee no longer controls the use of the underlying asset. This ASU also provides a practical expedient for private companies to use written terms and conditions of a common control arrangement to determine if a lease exists and the classification and accounting for that lease. This guidance is effective for fiscal years beginning after December 15, 2023. The Company is evaluating the effect that this guidance will have on the financial statements and related disclosures, and expect the impact to be immaterial.

ASU 2023-09, Income Taxes (Topic 740): Improvements to Income Tax Disclosures

In December 2023, the FASB issued ASU 2023-09 *Income Taxes (Topic 740): Improvements to Income Tax Disclosures*. This ASU is expected to enhance the transparency and decision usefulness of income tax disclosures by requiring disclosure of specific categories in the rate reconciliation, additional information for reconciling items that meet a quantitative threshold and certain information about income taxes paid. This revised guidance is effective for financial statements issued for fiscal years beginning after December 15, 2025. The update is expected to expand the Company's disclosures but will not have an impact on the Company's financial position or results of operations.

2. Significant Reinsurance Transactions

The Company acquires blocks of legacy reserves through legal entity acquisitions and reinsurance agreements. The following table summarizes the Company's significant run-off reinsurance transactions completed between January 1, 2022 and December 31, 2023 Values are shown in millions at the execution date of transaction.

Transaction	Execution Date	Tot Liabil Assu	lities	Total Assets Transferred		Deferred Gain (Cost)		Primary Nature of Transaction
Reinsurance agreement with a U.S. based life and annuity insurance company	November 20, 2023	\$ 2	8,193	\$	24,739	\$	(3,454)	Reinsurance of a block of universal life- type insurance, life contingent and non-life contingent payout annuities, fixed deferred annuity and fixed index annuity products on a funds withheld and coinsurance basis, with an effective date of October 1, 2023.
Reinsurance agreement with a U.S. based life insurance company	November 17, 2022	\$	1,239	\$	1,024	\$	(215)	Legacy block of fixed deferred annuities, with an effective date of October 1, 2022.
Loss portfolio transfer ("LPT") reinsurance agreement with a Bermuda based reinsurance company	March 31, 2022	\$	305	\$	297	\$	(8)	Quota share participation on reinsurance treaties from treaty years 2011 through 2020, net of inuring reinsurance, with an effective date of October 1, 2021.
Reinsurance agreement with an affiliated Japanese life insurance company	March 31, 2022	\$	4,173	\$	4,173	\$	_	Legacy block of payout and deferred annuities on a coinsurance basis, with an effective date of March 31, 2022.
LPT reinsurance agreement with a Bermuda based reinsurance company	February 17, 2022	\$	236	\$	236	\$	_	Small-business primary general liability policies for underwriting years 2013 through 2019, net of inuring reinsurance, with an effective date of February 25, 2021.

3. Fair Value Measurements

Fair Value Measurements on a Recurring Basis

Fair value is defined as the amount that would be received from the sale of an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The degree of judgment used in measuring the fair value of financial instruments generally inversely correlates with the level of observable valuation inputs. The Company maximizes the use of observable inputs and minimizes the use of unobservable inputs when determining fair value. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments for which no quoted prices are available have less observability and are measured at fair value using valuation models or other pricing techniques that require more judgment. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and not yet established, the characteristics specific to the transaction, liquidity and general market conditions.

Fair Value Hierarchy

Assets and liabilities recorded at fair value in the consolidated balance sheets are measured and classified in accordance with a fair value hierarchy consisting of three levels based on the observability of valuation inputs as follows:

- Level 1: Fair value is based on unadjusted quoted prices in active markets that are accessible to the Company for identical assets or liabilities.
- Level 2: Fair value is based on significant inputs, other than quoted prices included in Level 1, that are
 observable for the asset or liability, either directly or indirectly, for substantially the full term of the asset or
 liability through corroboration with observable market data. Level 2 inputs include quoted market prices in
 active markets for similar assets and liabilities, quoted market prices in markets that are not active for
 identical or similar assets or liabilities, and other market observable inputs.
- Level 3: Fair value is based on at least one significant unobservable input for the asset or liability. The
 assets and liabilities in this category may require significant judgement or estimation in determining fair
 value.

In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement in its entirety falls is determined based on the lowest level input that is significant to the fair value measurement.

The following is a description of the valuation methodologies used for assets and liabilities carried at fair value. These methodologies are applied to assets and liabilities across the levels discussed above, and it is the observability of the inputs used that determines the appropriate level in the fair value hierarchy for the respective asset or liability.

Valuation of Financial Instruments Measured at Fair Value

Funds withheld - directly managed

The Company has elected the FVO on the funds withheld - directly managed portfolios. The fair value of the underlying assets collateralizing the funds withheld - directly managed is generally based on market observable inputs using industry standard valuation techniques but also requires certain significant unobservable inputs for specific asset classes. The level in the fair value hierarchy assigned to the funds withheld - directly managed is based upon the observability of inputs used to value the underlying investment assets held at fair value within the funds withheld portfolio.

Fixed maturity securities

Whenever available, the Company obtains quoted prices in active markets for identical assets at the balance sheet date to measure fixed maturity securities at fair value. Market price data is generally obtained from dealer markets. The Company employs multiple independent third-party valuation service providers that gather, analyze, and

interpret market information to derive fair value estimates for individual investments, based upon market-accepted methodologies and assumptions. The methodologies used by these independent third-party valuation service providers are reviewed and understood by management, through periodic discussion with and information provided by the independent third-party valuation service providers, and a vendor hierarchy is maintained by asset type based on historical pricing experience and vendor expertise. The Company ultimately uses the price from the pricing service highest in the vendor hierarchy based on the respective asset type. The pricing hierarchy is updated, as needed, for new financial products.

When observable price quotations are not available, indicative broker quotes, asset manager pricing, or third-party valuation specialist pricing is used for valuation. Fair value can be determined based on discounted cash flow models using discount rates based on credit spreads, yields or price levels of comparable securities, adjusted for illiquidity and structure. The significant unobservable inputs used in the fair value measurement of these investments are liquidity discount rates applied to each of the net tangible book value multiples used in the internal valuation models, and discount rates applied to the expected cash flows of the underlying entities in various scenarios. These unobservable inputs in isolation can cause significant increases or decreases in fair value. Generally, an increase in the liquidity discount rate or discount rates would result in a decrease in the fair value of these private investments. Asset manager overrides and indicative broker quotes are generally included in Level 3 in the fair value hierarchy.

Mortgage loans

Fair value for mortgage loans is based upon the present value of the expected future cash flows discounted at the appropriate U.S. Treasury rate or foreign government bond rate (for non-U.S. dollar-denominated loans) plus an appropriate credit spread for loans of similar quality, average life and currency. The quality ratings for these loans, a primary determinant of the credit spreads and a significant component of the pricing process, are based on asset manager's internally developed methodology.

Derivative instruments (Other invested assets and derivative liabilities)

The fair values of derivative contracts can be affected by changes in interest rates, foreign exchange rates, credit spreads, market volatility, expected returns, NPR, liquidity and other factors.

The Company's derivative positions are traded in the OTC derivative market and are classified within Level 2 in the fair value hierarchy. OTC derivatives classified within Level 2 are valued using models that utilize actively quoted or observable market input from external market data providers, third-party pricing vendors and/or recent trading activity. The Company's policy is to use mid-market pricing in determining its best estimate of fair value. The fair values of most OTC derivatives, including cross-currency swaps and currency forward contracts are determined using discounted cash flow models.

The Company's cleared interest rate swaps and credit derivatives linked to an index are valued using models that utilize actively quoted or observable market inputs, including the SOFR, obtained from external market data providers, third-party pricing vendors, and/or recent trading activity. These derivatives are classified as Level 2 in the fair value hierarchy.

Other invested assets - LPs/LLCs

Other invested assets include investments in private equity funds, for which the Company utilizes NAV as an estimate of the fair value, which is a permitted practical expedient.

Short term investments

Fair values of short term investments are generally based on market observable inputs and are primarily classified as Level 2.

Cash and Cash equivalents

Cash and cash equivalents, including certain money market instruments, are primarily valued using unadjusted quoted prices in active markets that are accessible for identical assets and are primarily classified as Level 1. Due to their short term nature, all other instruments are primarily classified as Level 2 as amortized cost is used as the best estimate of fair value.

FIA embedded derivative

The index-crediting feature in the FIA products is an embedded derivative that is required to be accounted for separately from the host contract and is classified within policyholder contract deposits in the consolidated balance sheets. The fair value of the obligation is calculated based on actuarial and capital market assumptions related to the projected cash flows over the anticipated life of the underlying policies. The cash flow estimates are produced by market implied assumptions. This embedded derivative is reflected within Level 3 in the fair value hierarchy.

Assets and Liabilities Measured at Fair Value

The following table presents information about assets and liabilities measured at fair value on a recurring basis and indicates the level of the fair value measurement based on the observability of the inputs used as of December 31, (in millions):

Quantitative Information About Level 3 Fair Value Measurements

The table below presents information about the significant unobservable inputs used for recurring fair value measurements for certain Level 3 assets and liabilities, which includes only those financial instruments for which information about the inputs is reasonably available to the Company. Weighted averages are calculated by weighting each input by the relative fair value of the respective assets and liabilities. Table shows values as of December 31, (in millions):

	2023									
		Fair Value	Valuation Unobservable Technique Input		Range (Weighted Average)	Impact of Increase in the Input on Fair Value				
Assets:										
Fixed maturity:										
Corporate debt	\$	284	Discounted Cash Flow	Discount rate	5.09% - 9.51% 7.57%	Decrease				
·	\$	15	Trade price	Trade price	N/A	Increase				
	\$	59	Discounted Cash Flow	Discount rate	5.72% - 12.67% 8.57%	Decrease				
CDO / ABS	\$	103	Discounted Cash Flow	Spread	205 bps - 680 bps 377 bps	Decrease				
	\$	148	Trade price	Trade price	N/A	Increase				
Residential mortgage loans	\$	741	Level yield	Market yield	5.48% - 11.17% 7.97%	Increase				
	\$	140	Trade price	Trade price	N/A	Increase				
Liabilities:										
FIA embedded derivative	\$	252	Discounted Cash Flow	Lapse rate	2.10%-25.00%	Decrease				
				Spread over risk- free	0.00%-1.94%	Decrease				
				Withdrawal rate	1.75%-4.70%	Decrease				
				Mortality rate	0.12%-1.05%	Decrease				

Excluded from the above chart are certain level 3 assets that were valued by an external vendor and for which the unobservable inputs were not readily available. As of December 31, 2023, \$510 million of fixed maturity securities, AFS and fixed maturity securities, at fair value were excluded from assets under this criteria.

Collateral deposit liability		_		_		184		184		181

Information regarding the estimation of fair value for financial instruments not carried at fair value is discussed below:

Other invested assets - other

Includes policy loans and cash collateral posted in excess of derivative liabilities. For policy loans, carrying value generally approximates fair value. For cash collateral posted in excess of derivative liabilities, due to the short-term nature of these transactions, the carrying value approximates fair value.

Policyholder contract deposits associated with investment-type contracts

Policyholder contract deposits associated with investment-type contracts are estimated using discounted cash flow calculations based on interest rates currently being offered in the industry for similar contracts with maturities consistent with those of the contracts being valued. When no similar contracts are being offered, the discount rate is the U.S. Treasury spot rate or current risk-free interest rate. Other factors considered in the estimation process include current policyholder account values and related surrender charges, expectations about policyholder behavior and risk margin adjustments.

Collateral deposit liability

The fair value is estimated using a discounted cash flow calculation based on interest rates currently being offered in the industry for similar contracts with maturities consistent with those of the contracts being valued.

Total fixed maturity securities, AFS	\$	943	\$	(193)	\$	733	\$	(400)	\$	1,676	\$	(593)

Of the \$2,920 million of securities with an unrealized loss position as of December 31, 2023, 75% had a decline in fair value less than 18% of amortized cost. Additionally, \$563 million of the unrealized loss relates to investment-grade securities (or highly rated or securities with a Standard and Poor's rating of at least BBB-). Overall, the unrealized losses as of December 31, 2023 are primarily due to interest rate movements since the date of acquisition, and the Company does not intend to sell the securities, nor is it more likely than not that the Company will be required to sell the securities before recovery of the amortized cost basis.

As of December 31, 2022 the Company held 702 individual fixed maturity securities that were in an unrealized loss position, 182 of which were in a continuous unrealized loss position for 12 months or more. The Company did not recognize the unrealized losses in earnings on these fixed maturity securities within the consolidated statements of income (loss) as of December 31, 2023 or as of December 31, 2022 because the Company neither intended to sell the securities nor believed that it was more likely than not that the Company will be required to sell these securities before recovery of their amortized cost basis. The Company did not recognize any other-than-temporary impairments losses on fixed maturity securities for the year ended December 31, 2022.

Contractual Maturities of Fixed Maturity Securities AFS

The following table presents the amortized cost and fair value of fixed maturity securities AFS by contractual maturity as of December 31, (in millions):

		20	23		2022						
	Total Fixed Maturity Securities, AFS										
	Amortized Cost			Fair Value	Amortized Cost			Fair Value			
Due in one year or less	\$	68	\$	67	\$	20	\$	19			
Due after one year through five years		2,343		2,381		214		204			
Due after five years through ten years		1,829		1,875		184		153			
Due after ten years		12,724		12,946		1,541		1,019			
Mortgage-backed, asset-backed and collateralized		1,969		1,939		315		292			
Total	\$	18,933	\$	19,208	\$	2,274	\$	1,687			

Actual maturities may differ from contractual maturities because issuers may have the right to call or prepay obligations with or without call or prepayment penalties. Asset-backed, commercial mortgage-backed, residential mortgage-backed, and collateralized securities are shown separately in the table above, as they do not have a single maturity date.

Proceeds and gross gains and losses from sales

The following table presents the proceeds from sales and the gross gains and losses on those sales of AFS fixed maturity securities for the years ended December 31, (in millions):

	2023		2022	
Proceeds from voluntary sales	\$	1,069 \$	588	
Gross gains		22	2	
Gross losses		(44)	(74)	

Allowance for Credit Losses and Impairments - Fixed Maturity Securities AFS

The following table presents the rollforward of the allowance for credit losses in fixed maturity securities by type for the year ended December 31, (in millions):

	 on-U.S. ernments	Corporate debt		CMBS	CDO / ABS	i	Total
Balance, January 1, 2023 ⁽¹⁾	\$ 3 \$	37	\$	1	\$	3 \$	44
Additional increases or decreases to the allowance for credit losses on securities that had an allowance recorded in a previous period	(1)	(3))	_		(2)	(6)
Balance, December 31, 2023	\$ 2 \$	34	\$	1	\$	1 \$	38

⁽¹⁾ Prior to January 1, 2023, credit losses on AFS securities were not recorded as an allowance but were recorded as a reduction of the book value of the security if the security was other-than-temporarily impaired. The adoption impact due to the transition for AFS securities was \$44 million.

Other Invested Assets

The following table presents a breakdown of other invested assets by asset class as of December 31, (in millions):

Derivatives	23	91
Other	105	_
Total other invested assets	\$ 1,740	\$ 1,228

⁽¹⁾ Includes related party balances of \$1,585 million and \$1,125 million as of December 31, 2023 and 2022, respectively.

The private equity funds are subject to restrictions on redemptions and sales that are determined by the governing documents, which limit the ability to liquidate those investments. These restrictions may include lock-ups, redemption gates, restricted share classes or side pockets, restrictions on the frequency of redemption and notice periods.

Net Investment Income

The following table presents the components of net investment income for the years ended December 31, (in millions):

	_	2023	2022
Fixed maturity securities	\$	362	\$ 128
Mortgage loans		34	
Other invested assets		125	50
Short term investments and other investments		31	15
Funds withheld - directly managed		1,502	1,677
Gross investment income		2,054	1,870
Investment expenses ⁽¹⁾		(73)	(49)
Net investment income	\$	1,981	\$ 1,821

⁽¹⁾ For the year ended December 31, 2023, investment expenses includes \$25 million of expense related to liabilities associated with repurchase agreements.

Investment Gains (Losses)

The following table presents the components of investment gains (losses) for the years ended December 31, (in millions):

	2023	2022
Realized gains (losses) on fixed maturity securities	(3	39) (88)
Unrealized gains (losses) on fixed maturity securities under the FVO	(90 (118)
Realized gains (losses) on funds withheld - directly managed	(61	15) (995)
Net gains (losses) on derivative instruments	(11	–
Net gains (losses) on FIA embedded derivative		8 —
Other realized gains (losses)		1 —
Investment gains (losses)	\$ (66	§ (1,201)

The amount of unrealized appreciation (depreciation) of fixed maturity securities, AFS reclassified from accumulated other comprehensive income (loss) to investment gains (losses) upon the sale of securities was \$22 million for the year ended December 31, 2023 and \$(4) million for the year ended December 31, 2022.

Included in investment gains (losses) from funds withheld - directly managed for the years ended December 31, 2023 and 2022 are \$208 million of losses and \$42 million of gains, respectively, related to the transfer of securities from funds withheld - directly managed to fixed maturity securities, AFS.

Securities Pledged and Restricted Assets

The Company pledges as collateral investment securities it owns to unaffiliated parties through certain transactions, including securities sold under repurchase agreements and postings of collateral with derivative counterparties.

The Company utilizes asset trust accounts to collateralize business with reinsurance counterparties. As of December 31, 2023 and 2022 the Company held \$19,953 million and \$4,211 million, respectively, of assets in these trusts for the benefit of the counterparties.

As of December 31, 2023 and 2022, 74% and 90%, respectively, of the fixed maturity securities within the funds withheld - directly managed, serving as collateral for the reinsurance receivable, are classified as investment grade by the National Association of Insurance Commissioners ("NAIC").

Concentration of Credit Risk

Other than the funds withheld - directly managed balance attributable to the ceding reinsurers, i.e., affiliates of Corebridge and Lincoln National Corp., there are no significant concentrations of credit risk within the Company's invested assets. In the event of a ceding company's insolvency, the Company would need to assert a claim on the investments collateralizing the reinsurance receivable and used to settle liabilities. However, the Company has the ability to offset amounts owed to the ceding company, which reduces the risk of loss. In accordance with the terms of the reinsurance agreements, the Company is obligated to fund any shortfall between U.S. statutory book value of the investments collateralizing the reinsurance receivable and U.S. statutory insurance reserves. Likewise, if there is an excess between the U.S. statutory book value of investments collateralizing the reinsurance receivable and U.S. statutory insurance reserves, the ceding companies are required to distribute the excess to the Company.

5. Derivatives and Hedging

Types of Derivative Instruments and Derivative Strategies

The Company utilizes various derivative instruments and strategies to manage interest rate, foreign currency exchange rate, equity and credit risk. Commonly used derivative instruments include but are not necessarily limited to:

- Interest rate contracts: futures, swaps, swaptions, forwards, options, caps and floors, treasury bond total return swaps
- Equity contracts: futures, options and total return swaps
- Foreign exchange contracts: futures, options, forwards and swaps
- Credit contracts: single and index reference credit default swaps, credit default index swaptions and credit index options

See Note 1 for a detailed discussion of the accounting treatment for derivative instruments. See Note 3 for additional disclosures related to the fair value of derivative instruments.

Interest Rate Contracts

Interest rate swaps are used by the Company to reduce risks from changes in interest rates, and manage interest rate exposures arising from mismatches between assets and liabilities and to hedge against changes in their values it owns or anticipates acquiring or selling.

Interest rate swaps may be attributed to specific assets or liabilities or to a portfolio of assets or liabilities. The Company agrees with counterparties to exchange, at specified intervals, the difference between fixed-rate and floating-rate interest amounts calculated by reference to an agreed upon notional principal amount.

Treasury bond total return swaps are contracts whereby the Company agrees with counterparties to exchange, at specified intervals, the difference between the return on an asset and Secured Overnight Financing Rate ("SOFR") plus an associated funding spread based on a notional amount. The Company generally uses total return swaps to hedge the effect of changes interest rate movements.

Equity Contracts

Equity options are used by the Company to manage its exposure to the equity markets which impacts the value of assets and liabilities it owns or anticipates acquiring or selling.

Equity options are contracts which will settle in cash based on differentials in the underlying indices at the time of exercise and the strike price. The Company uses combinations of purchases and sales of equity index options to hedge the effects of adverse changes in equity indices within a predetermined range.

The Company has assumed through reinsurance certain FIA products with index-based crediting that constitutes an embedded derivative. The cedant hedges this risk and provides the benefits of this hedging as part of the reinsurance settlements.

Foreign Exchange Contracts

The Company utilizes currency derivatives, including currency swaps and forwards, to reduce risks from changes in currency exchange rates with respect to investments or reinsurance contracts denominated in foreign currencies that the Company either holds or intends to acquire or sell.

Under currency forwards, the Company agrees with counterparties to deliver a specified amount of an identified currency at a specified future date. Typically, the price is agreed upon at the time of the contract and payment for such a contract is made at the specified future date.

Under currency swaps, the Company agrees with counterparties to exchange, at specified intervals, the difference between one currency and another at an exchange rate and calculated by reference to an agreed principal amount. Generally, the principal amount of each currency is exchanged at the beginning and termination of the currency swap by each party.

Primary Risks Managed by Derivatives

The table below provides a summary of the gross notional amount and fair value of derivative contracts by the primary underlying risks, excluding derivatives within funds withheld - directly managed. Many derivative instruments contain multiple underlying risks. The fair value amounts below represent the value of derivative contracts prior to taking into account the netting effects of master netting agreements and cash collateral as of December 31, (in millions):

		2023						2022						
		Gross Fair Value					Gross Fair Value							
Instrument Type	No	otional	Assets		Liabilities		Notional		Assets		Liabilities			
Interest rate swaps	\$	4,822	\$	16	\$	249	\$	_	\$	_	\$

Total Derivatives	\$ (102)	\$	(224)	\$ -	Ξ.	\$ 26				

⁽¹⁾ Amounts exclude the excess of collateral received/pledged from/to the counterparty.

Counterparty Credit Risk

The Company is exposed to credit-related losses in the event of non-performance by counterparties to financial derivative transactions with a positive fair value. The Company manages credit risk by (i) entering into derivative transactions with highly rated major international financial institutions and other creditworthy counterparties governed by master netting agreements, as applicable; (ii) trading through central clearing and OTC parties; and (iii) obtaining collateral, such as cash and securities, when appropriate.

Substantially all of the Company's derivative agreements require daily full collateralization by the party in a liability position.

6. Reinsurance

The following table shows the effects of assumed reinsurance on the consolidated statements of income (loss) for the years ended December 31, (in millions):

	2	023	2022
Premiums	\$	217 \$	225
Policy charges and fee income		251	84
Policyholder benefits and losses incurred		1,807	898
Interest credited to policyholder account balances (1)		391	318

⁽¹⁾ Includes related party balances of \$33 million and \$29 million, respectively, for the years ended December 31, 2023 and 2022.

The following table shows the effects of assumed reinsurance on the consolidated balance sheets as of December 31, (in millions):

		2023	20)22
	_			
Future policy benefits	\$	40,524	\$	26,940
Policyholder contract deposits ⁽¹⁾		25,248		11,518
Unpaid losses and loss adjustment expenses		3,168		3,613
Reinsurance payable ⁽¹⁾		857		752

⁽¹⁾ Policyholder account balances and reinsurance payables include related party balances of \$ 2.8 billion and \$ 125 million, respectively, as of December 31, 2023 and \$3.5 billion and \$144 million, respectively, as of December 31, 2022.

7. Insurance Liabilities

Long Duration Lines of Business

Liabilities for long-duration contracts are classified as future policy benefits or policyholder contract deposits. Future policy benefits include retirement products whose payments depend on contract holder's survival such as structured settlements with life contingencies, immediate annuities with life contingencies, and pension risk transfer annuities; and traditional life insurance products such as WL and RoP term, A&H and LTC and the additional insurance liability associated with universal life-type contracts with secondary guarantees. Policyholder contract deposits apply to investment contracts such as structured settlements and SPIA with non-life contingent benefits, deferred annuity contracts in the accumulation phase and the fund values of universal life-type insurance contracts.

Future Policy Benefits

Future policy benefits include liability cash flows that are long-duration and relatively stable. Reserves for traditional life, A&H and life-contingent annuity payout contracts represent an estimate of the present value of future benefits less the present value of future net premiums. Future policy benefits also include additional insurance liabilities for universal life-type contracts with secondary guarantees, liabilities for annuities issued in structured settlement arrangements whereby a claimant has agreed to settle a general insurance claim in exchange for fixed payments over a fixed determinable period of time and may also contain a life contingency feature.

Life, annuity and A&H reserves are established using assumptions for investment yields, mortality, morbidity, lapses and expenses, including a provision for adverse deviation where applicable. The Company reviews the adequacy of the reserves by projecting asset and liability cash flows into the future using best estimate assumptions for mortality, morbidity, lapse, expenses and investment yield. If deficiencies are found to exist, then the Company may record additional liabilities.

The additional insurance liability for the universal life-type contracts with secondary guarantee features is calculated by estimating the present value of total expected benefit payments over the life of the contract from inception divided by the present value of total expected assessments over the life of the contract ("benefit ratio") multiplied by the cumulative assessments recorded from the contract inception through the balance sheet date less the cumulative payments plus interest on the liability. The change in the liability for a period is the benefit ratio multiplied by the assessments recorded for the period less payments made in the period plus interest. Assessments are the aggregate of all charges, including those for administration, mortality, expense, and surrender, regardless of how characterized, including investment margins. As experience or assumption changes result in a change in expected benefit payments or assessments, the benefit ratio is recalculated using the updated expected benefit payments and assessments over the life of the contract since inception. The revised benefit ratio is then applied to the liability calculation described above, with the resulting change in liability reported in policyholder benefits on the consolidated statements of income (loss) except that, to the extent that the change in liability calculation is driven by a change in unrealized investment margins arising from securities classified as available for sale, then the resulting change in liability is reported as a component of accumulated other comprehensive income (loss).

The following table presents future policy benefits by product line as of December 31, (in millions):

	 2023	2022
Structured settlements	\$ 15,808	\$ 16,163
Universal life with secondary guarantees	11,603	_
Pension risk transfer annuities	4,210	3,210
Traditional WL	3,220	3,286
SPIA	2,798	1,422
Term life insurance	2,127	2,079
Long term care	424	428
A&H	334	352
Total	\$ 40,524	\$ 26,940

Policyholder Contract Deposits

Policyholder contract deposits are investment contracts that include universal life-type insurance contracts, SPIA and structured settlement contracts with period certain payment streams (i.e. not depending on longevity), deferred annuity contracts in the accumulation phase and the fund values of universal life-type insurance contracts.

- Universal life-type products with secondary guarantee benefits includes: (1) a block of single life universal
 life policies with LTC rider benefits and (2) a quota share of a block of single life and joint life universal life
 with secondary guarantee benefits. These products contain secondary guarantee benefits which keeps the
 policy in force even when the account value is depleted so long as secondary guarantee requirements have
 been met.
- Deferred annuities cash flows are designed to collect premiums and accrue credited interest over an extended period for payout at a later date;
- Non-life contingent SPIA cash flows also consist of certain level payments over a specified duration with a range from five to thirty years or more;
- Non-life contingent structured settlement cash flows consist of certain payments with set payment patterns such as level payment, compound increase, fixed amount increase or one-time lump sum payments. The non-life contingent cash flows are thus highly predictable;

 Universal life-type products are interest sensitive and provide permanent coverage for life insurance with the potential to accumulate cash value.

The following table presents policyholder contract deposits by product line as of December 31, (in millions):

	 2023	2022
Universal life with secondary guarantees	\$ 10,322	\$ _
Deferred annuities	6,237	4,337
SPIA – non-life contingent	3,216	3,590
FIA	2,107	_
Structured settlements – non-life contingent	1,963	2,115
Interest sensitive universal life	1,403	1,476
Total	\$ 25,248	\$ 11,518

Interest crediting rates for the Company's policyholder contract deposits range from 1% to 6%. The interest crediting rate for FIA are equity market dependent.

Short Duration Lines of Business

The Company's loss reserves cover excess workers' compensation, environmental impairment liabilities, legacy environmental and all other lines which consists of other casualty run-off exposures, including primary workers' compensation, general liability, professional liability, medical malpractice, product liability, and A&H exposures. In establishing retroactive reinsurance claim liabilities, the Company analyzes historical aggregate paid and reported loss patterns and projects losses into the future under various actuarial methodologies. The Company expects to pay claims for several decades for many lines of business. The Company monitors paid and reported claim activity and reviews ceding company reports and other information concerning the underlying losses. The Company reassesses and revises the expected timing and amounts of ultimate losses periodically or when significant events are revealed through monitoring and actuarial review processes.

The following table details the Company's liabilities for unpaid loss and loss adjustment expenses as of December 31, (in millions):

	2023									
	Ca Rese			IBNR	LAE			Total		
Excess workers' compensation	\$	603	\$	880	\$	89	\$	1,572

Total liability for unpaid loss and loss adjustment expenses	\$	1,399	\$	1,656	\$	558	\$	3,613		

The following table provides a roll forward of loss and loss adjustment expense reserves including detail on paid and incurred losses from prior accident years and the current accident year for the years ended December 31, (in millions):

Unpaid losses and loss adjustment expenses	2023	2022
Balance at beginning of period	\$ 3,613	\$ 3,310
Assumed business	_	541
Net losses incurred:		
Current period	3	3
Prior period ⁽¹⁾	(100)	72
Total net losses incurred	(97)	75
Effect of change in discount	54	59
Net paid losses:		
Current period	_	_
Prior period	(402)	(372)
Total net paid losses	(402)	(372)
Balance at end of period	\$ 3,168	\$ 3,613

⁽¹⁾The (favorable) and unfavorable developments for the applicable periods were added to the basis of the respective deferred gain and deferred costs within the consolidated balance sheets consistent with the accounting policy described in Note 1.

The following table details prior accident year loss development for the years ended December 31, (in millions):

(Favorable) / Unfavorable prior year development	2023	2(022
Excess workers' compensation	\$ (125)	\$	(56)
Environmental impairment liabilities	(62)		0
Legacy environmental	44		12
All other lines	43		116
Total prior year development	\$ (100)	\$	72

The significant drivers of the prior year loss development are discussed below. Prior year loss development is recorded after taking into consideration the results from actuarial analyses that are performed for each reserving line of business as well as on-going review of actual vs. expected results performed during the course of each calendar year. See Note 8 for additional information on the amortization of deferred gain and deferred costs.

Prior Year Loss Development - year ended December 31, 2023

During 2023, the Company recognized favorable prior year loss reserve development of \$100 million. In general, the prior year development was booked after taking into consideration the results from the actuarial analyses the Company performed for each line of business over the course of calendar year 2023, as well as a review of actual versus expected results during the calendar year.

With respect to individual lines of business detailed in the table above:

- Excess Workers' Compensation: The Company booked \$125 million in favorable prior year development.
 This favorable development was spread throughout a number of historical accident years, which was a result of continuing loss mitigation efforts for this line of business.
- Legacy Environmental: The Company booked \$44 million in unfavorable prior year development. This
 unfavorable development was a result of an increase in claim frequency assumption as well as some case
 reserve strengthening on certain accounts.
- Environmental Impairment Liabilities: The Company booked \$62 million in favorable prior year development. This favorable development was mostly driven by favorable settlements on claims that closed since the prior review.
- All Other Lines: The Company booked \$43 million of unfavorable prior year development due to a few accounts that experienced higher than expected loss activity.

Prior Year Loss Development - year ended December 31, 2022

During 2022, the Company recognized unfavorable prior year loss reserve development of \$72 million. This unfavorable development was comprised of \$56 million favorable development relating to excess workers' compensation, \$12 million unfavorable development within legacy environmental, \$2 million favorable development in all other lines assumed prior to 2022 and \$118 million unfavorable development from new deals assumed in 2022. In general, the prior year development was booked after taking into consideration the results from the actuarial analyses the Company performed for each line of business over the course of calendar year 2022, as well as a review of actual versus expected results during the calendar year.

With respect to individual lines of business detailed in the table above:

- Excess Workers' Compensation: The Company booked \$56 million in favorable prior year development.
 This favorable development was spread throughout a number of historical accident years, which the Company believes was a result of continuing loss mitigation efforts for this line of business.
- Legacy Environmental: The Company booked \$12 million in unfavorable prior year development. This
 unfavorable development was a result of an increase in the Excess segment due to higher average severity
 assumptions offset by a lower frequency assumption for the Primary segment combined with a favorable
 settlement for the small party accounts associated with the Lower Passaic River site.
- All Other Lines: The Company booked \$2 million of favorable prior year development attributable to the Runoff Divisions loss portfolio. \$118 million of adverse development was recognized on business assumed in 2022 due to adverse development since the deals were originally priced.

Disclosures of Incurred and Paid Loss Development, IBNR, Claims Counts and Payout Percentages

With respect to the cumulative incurred and cumulative paid information presented below, all information for retroactive reinsurance agreements is presented prospectively from the date at which the reserves were assumed. As the reserves are effectively re-underwritten at the date the reserves are assumed, the Company believes that the historical loss development prior to being assumed by the Company is not relevant to the Company's own

experience managing these reserves. In addition, the information required to prepare the loss development on a retrospective basis is not always available to the Company. The Company analyzes the loss development tables on a prospective basis by the year in which the Company assumes the reserves such that the impact of the assumed reserves from year to year does not distort the loss development tables.

The environmental impairment line of business is significant and therefore a further development table has been provided for this line of business. As described below, the excess workers' compensation and legacy environmental lines of business do not have any incurred or paid losses within the past 10 accident years, and therefore no further loss development tables have been provided for these lines of business.

Reserves assumed in the year ended December 31, 2018 - All lines of business assumed prior to 2022.

Excess Workers' Compensation

Excess workers' compensation has a long tail and is one of the most challenging lines of business from an actuarial reserving perspective, particularly when the excess coverage is provided above a self-insured retention layer. The class is highly sensitive to small changes in assumptions (for example, the rate of medical inflation or the longevity of injured workers) which can have a significant effect on the ultimate reserve cost estimate. Excess workers' compensation business was written over qualified self-insurance from the 1970's through 2012. In this book of business, the claims are not handled (or administered) by the ceding company personnel, but are administered by the client's designated third party administrators ("TPAs"). However, claims personnel affiliated with the Company maintain an oversight role over these TPAs and claims.

Loss and loss adjustment expense liability estimates for excess workers' compensation exposures are subject to additional uncertainties, due to the following:

- Claim settlement time is longer than most other casualty lines, due to the lifetime benefits that can be expected to pay out on certain claims;
- Coverage statutes that vary by state; and
- Future medical inflation costs are difficult to estimate.

A combination of traditional methods (paid and incurred loss development) and non-traditional methods (individual claim annuity model, report year incurred loss development, and IBNR count/severity methods) are used to estimate loss and loss expense liability estimates. Loss data is segmented so as to reflect the anomalies in the historical data due to the various loss mitigation initiatives employed over the last several years.

The last claim related to this business occurred more than 10 years ago and there were no incurred losses and allocated loss adjustment expenses related to the last 10 accident years. The total actual paid losses were \$61 million and \$56 million for the years ending December 31, 2023 and 2022, respectively.

Environmental Impairment Liability

Environmental impairment includes pollution legal liability, contractor's pollution liability, errors and omissions, underground storage tank policies, and other related products written prior to June 1, 2016. The process of establishing reserves for environmental impairment claims is subject to greater uncertainty than the establishment of reserves for liabilities relating to other types of insurance claims. As a result of the significant uncertainty inherent in determining environmental impairment liabilities and establishing related reserves, the use of conventional reserving methodologies frequently has to be supplemented by reviewing each of the outstanding claims on a claim-by-claim basis in establishing the reserves. Additional consideration is given by evaluating the exposure presented by each policyholder, the anticipated cost of resolution, if any, for each policyholder, available coverage, and the relevant judicial interpretations and historical value of similar exposures in establishing the reserves. Environmental impairment liability includes multi-year policies written prior to June 1, 2016. Incurred loss activity for accident years 2017 and subsequent consists of losses from these multi-year policies as the premium earns out over the life of the contract. Incurred loss activity for all accident years is classified as retroactive reinsurance.

Reported claim counts, on a cumulative basis, are provided as supplemental information to the incurred loss table below by accident year. The claim frequency is determined at the claimant level for the relevant exposures and the Company's claims system identifies a unique claim identifier to each reported claim that the Company receives.

Legacy Environmental

Legacy Environmental exposure consists of indemnity claims asserting property damage from toxic waste, hazardous substances, and other environmental pollutants, and claims to cover the cleanup costs of hazardous waste and pollution sites. The vast majority of these Legacy Environmental claims emanate from policies written in 1985 and prior years. Commencing in 1985, standard general liability policies contained an absolute exclusion for pollution-related damage. Environmental Impairment Liability exposures underwritten on a claims-made basis, which were written generally starting in 1986, are not included in this line of business.

Loss and loss adjustment expense liability estimates for mass torts, such as Legacy Environmental exposures, are subject to additional uncertainties, due to the following:

- · Case law is not fully developed;
- Coverage interpretation varies by state;
- The process of estimating provisions for premises and operations coverage is highly judgmental;
- · "State of the art" analysis is a moving target; and
- · Environmental reform could have a significant effect on ultimate liabilities.

To estimate loss and loss adjustment expenses reserve liability estimates, traditional methods (paid and incurred loss development, paid and incurred Cape Cod methods) are used to project historical report years to estimate incurred but not enough reported reserves, and count/severity methods are used to project future report years to estimate "pure" incurred but not reported reserves. For some large accounts and sites, reserves are based on claim department estimates and analysis. After this ground-up analysis is completed, the Company reviews the reasonability of the estimates by calculating certain ratios, such as survival ratios (defined as the ratio of indicated/carried reserves to a three year average payment) and IBNR-to-case ratios, and compare these ratios against industry benchmarks. In addition, the Company performs a market share analysis as another measure to assess the reasonableness of the indicated/carried loss reserves.

The last claim related to this business occurred more than 10 years ago and there were no incurred losses and allocated loss adjustment expenses related to the last 10 accident years. The total actual paid losses were \$32 million and \$39 million for the years ending December 31, 2023 and 2022.

All Other Lines

All Other Lines consist of various primary workers' compensation, general liability, professional liability, medical malpractice, products liability, commercial automobile liability, and A&H exposures from business units that have been put into run-off. In general, loss and loss adjustment expense liabilities are estimated separately. Traditional loss estimation methods include paid and incurred loss development methods and generalized paid and incurred Cape Cod methods. The Company also looks at an IBNR-to-Case ratio method for certain segments, a survival ratio method for some general liability segments, and an annuity model approach for some of the larger workers' compensation claims. Loss adjustment expense methods include both standard development methods and also the calendar year paid to paid method, which applies the paid to paid ratio to the loss reserves.

All Other Lines business assumed in 2022

The loss development tables below reflect general liability and professional liability exposures assumed by the Company during 2022. Individual claim level data required to create the cumulative number of reported claims is not available for these exposures.

Claims Payout Patterns

The following table presents unaudited supplementary information detailing the historical average annual percentage claims payout on an accident year basis at the same level of disaggregation as presented above for the year ended December 31, 2023.

Average Annual Percentage Payout of Incurred Losses by Age, Net of Reinsurance (Unaudited)

Year	1	2	3	4	5	6	7	8	9	10
Environmental impairment liabilities	6.3%	14.3%	14.2%	10.6%	6.7%	7.0%	6.2%	4.0%	3.8%	2.6%
All Other Lines business assumed in 2022	0.1%	2.6%	6.7%	9.6%	11.6%	11.9%	10.9%	9.2%	7.2%	6.8%

Given the significant amount of loss and loss adjustment expense reserves in the 2013 and prior accident years, and different distributions among lines of business and accident year, a total claim payout pattern is not meaningful.

Collateral Deposit Liability

For the year ended December 31, 2023 the Company incurred \$48 million of paid losses and (\$5) million of interest credited to policyholders in relation to the collateral deposit liability. For the year ended December 31, 2022 the Company incurred \$18 million of paid losses and \$11 million of interest was credited to policyholders.

8. Value of Business Acquired, Deferred Gains and Deferred Costs of Reinsurance Contracts

VOBA liability

The following table presents the balances and changes in the VOBA liability for the years ended December 31, (in millions):

	 2023)22
Balance, beginning of period	\$ 3,824	\$	4,053
Amortization	(207)		(229)
Balance, end of period	\$ 3,617	\$	3,824

Other	_		(3)
Ending Carrying Value	\$ 299	\$	258

9. Contingencies and Commitments

Litigation and Regulatory Matters

As of December 31, 2023 and 2022, the Company has no material contingent liabilities arising from litigation, income taxes, make-whole fee conditions or other matters, other than liabilities arising in the normal course of its business of reinsurance.

Commitments

The Company has commitments to purchase or fund investments, mostly private fixed maturity securities, mortgage loans and alternative investments. The following amounts include unfunded commitments that are not unconditionally cancellable. As of December 31, 2023 and 2022, the outstanding balance on commitments for mortgage loans, private credit fixed maturity securities, and alternative investments managed by unaffiliated counterparties was \$110 million and \$615 million, respectively.

As of December 31, 2023 and 2022, these commitments include unfunded commitments of \$1,786 million and \$1,620 million, respectively, associated with investments managed by affiliates of Carlyle, a related party. See Note 11 for further information regarding related party investments.

10. Income Taxes

FRL elected to be treated as a U.S. domestic insurance company for U.S. tax purposes under section 953(d) of the U.S. Internal Revenue Code and is subject to federal income taxation in the U.S.

Effective for 2022, FRL became a life insurance company for U.S. tax purposes once the total amount of its life reserves exceeded the 50% threshold under U.S. tax law. Thereupon, FRL (and, consequently, FRL's subsidiary Fortitude Re Investments, LLC ("FRI")) deconsolidated from the FGH consolidated tax return group. FRL will be eligible to rejoin the consolidated return group no later than the 2027 tax year and the entity will file a separate tax return in the interim. FRI is ineligible to join FRL in a consolidated tax filing and, as such, files its own consolidated return with its wholly owned subsidiaries. FRI and its wholly owned subsidiaries will be eligible to rejoin the FGH consolidated tax return group once its immediate parent company, FRL, rejoins.

In mid-December 2023, the Bermuda Parliament passed legislation enacting a 15% corporate income tax ("CIT") regime that will become effective for tax years beginning on or after January 1, 2025. This legislation received governor's assent on December 27, 2023. The Bermuda income tax rules are intended to align as closely as possible to the Organization for Economic Cooperation and Development's global anti-base erosion rules. Effective for fiscal years beginning on or after January 1, 2025, certain groups with a limited international footprint are eligible for a five-year deferral, extending the effective date to January 1, 2030. The Company will be eligible for this deferral. In addition, certain elections and economic transition adjustments are available to support a fair and equitable transition into the Bermuda CIT regime. Based on the Company's current profile and the likelihood of not

being subject to the Bermuda CIT for some time after the deferral period ends, the Company will continue to evaluate the need for and availability of these elections and transition adjustments. There are no material implications with respect to the Bermuda CIT for the year ended December 31, 2023.

U.S. Tax Law Changes

On August 16, 2022, the U.S. enacted The Inflation Reduction Act of 2022, which provides among other provisions a new corporate alternative minimum tax ("CAMT"). The CAMT is effective for taxable years beginning after December 31, 2022 and generally applies to taxpayers with average annual financial statement income exceeding \$1 billion over a three-year period. The Company determined that there are no implications with respect to CAMT for the years ended December 31, 2023 and 2022.

Effective Tax Rate

The following table presents the income tax expense (benefit) for the years ended December 31, (in millions):

20	23	2022
\$	(24) \$	118
	267	(2,030)
\$	243 \$	(1,912)
	\$	267

The Company's actual income tax expense (benefit) differs from the statutory U.S. federal amount computed by applying the U.S. federal income tax rate of 21% to net income (loss) before tax due to the following, as shown in the following reconciliation for the years ended December 31, (in millions):

 2023		2022
\$ 1,350	\$	(9,106)
283		(1,912)
(20)		_
(20)		_
\$ 243	\$	(1,912)
\$	\$ 1,350 283 (20) (20)	\$ 1,350 \$ 283 (20) (20)

Deferred Taxes

The following table presents the components of the net deferred tax assets (liabilities) as of December 31, (in millions):

	 2023	2022
Deferred tax assets:		
VOBA	\$ 760 \$	803
Loss on funds withheld - directly managed	411	814
Reinsurance settlement	404	351
Life policy reserves	480	148
Basis difference on investments	_	139
Deferred gain from reinsurance	160	161
Deferred acquisition costs	245	39
Non-life reserves	24	31
Capital loss carryforward	4	_
Net operating loss	340	_
Employee benefits	6	5
Anticipated Foreign Tax Credit - Bermuda	7	_
Other	6	_
Total deferred tax assets	 2,847	2,491
Deferred tax liabilities:		
Reinsurance modification	(20)	(22)
Basis difference in investments	(36)	(17)
Deferred cost of reinsurance	(722)	<u> </u>
Basis difference in investments - Bermuda	(7)	_
Total deferred tax liabilities	(785)	(39)
Net deferred tax asset before valuation allowance	2,062	2,452
Valuation allowance	_	_
Net deferred tax asset (liability) ⁽¹⁾	\$ 2,062 \$	2,452

⁽¹⁾ As of December 31, 2023, the net deferred tax asset (liability) of \$2,062 million is equal to the net deferred tax asset of \$2,108 million and net deferred tax liability of \$46 million (included within other liabilities) on the consolidated balance sheets. As of December 31, 2022, the net deferred tax asset (liability) of \$2,452 million is equal to the net deferred tax asset of \$2,469 million and net deferred tax liability of \$17 million (included within other liabilities) on the consolidated balance sheets. The balance sheet presentation of deferred tax accounts differs due to the requirement to present deferred tax assets and liabilities based on the multiple tax filings groups within the Company.

The difference between the decrease in the net deferred tax asset (liability) balance of \$390 million and the deferred tax expense recognized for the year of \$267 million, which totals approximately \$123 million, represents the current year deferred tax liability of \$116 million recorded in AOCI, and \$7 million due to a deferred tax liability transfer from FGH (See Note 12).

Capital Loss Carryforwards and Net Operating Loss Carryforwards

During 2023, the Company generated a capital loss carryforward of \$4 million. As of December 31, 2023 the capital loss carryforward totals \$20 million, which represents a \$4 million deferred tax asset. This capital loss will be carried forward for five years from the time it was generated and utilized against any future capital gains generated during that period. As discussed below, the capital loss carryforward is not subject to a valuation allowance because it is more likely than not that the carryforward will be fully utilized during the carryforward period.

The Company's net operating loss balance totaled \$340 million as of December 31, 2023, which can be carried forward indefinitely. The Company expects the net operating loss to be fully utilized in the near term.

As of December 31, 2022, the Company did not have any capital loss or net operating loss carryforwards.

Valuation Allowance on Deferred Tax Assets

The evaluation of the recoverability of the deferred tax asset and the need for a valuation allowance requires the Company to weigh all positive and negative evidence to reach a conclusion that it is more likely than not that all or some portion of the deferred tax asset will not be realized. The weight given to the evidence is commensurate with the extent to which it can be objectively verified. The more negative evidence that exists, the more positive evidence is necessary and the more difficult it is to support a conclusion that a valuation allowance is not needed.

In evaluating the need for a valuation allowance, the Company considers many factors, including:

- the nature of the deferred tax assets and liabilities;
- · whether they are ordinary or capital;
- · the timing of their reversal;
- taxable income in prior carryback years;
- projected taxable earnings exclusive of reversing temporary differences and carryforwards;
- · the length of time that carryovers can be utilized;
- any unique tax rules that would impact the utilization of the deferred tax assets; and
- any tax planning strategies that the Company would employ to avoid a tax benefit from expiring unused.

Although realization is not assured, management believes it is more likely than not that the deferred tax assets, net of valuation allowances, will be realized.

For the years ended December 31, 2023 and 2022, based on all available evidence, management believed that it was more likely than not that its net deferred tax asset will be realized. Therefore, the Company did not record a valuation allowance against its net deferred tax asset for this period.

Accounting for Uncertainty in Income Taxes

The Company filed federal tax returns for the years ended December 31, 2023, 2022 and 2021. All three returns are open for examination.

The Company also periodically evaluates uncertain tax positions to determine whether the tax positions are more likely than not to be realized as a tax benefit or expense in the current year. The Company recognizes interest and penalties related to uncertain tax benefits in U.S. Federal income tax expense. For the years ended December 31, 2023 and 2022, there were no uncertain tax positions and no accrual for interest and penalties. The Company does not anticipate any significant changes within the next twelve months to its total unrecognized tax benefits related to tax years for which the statute of limitations has not expired.

11. Related Party Transactions

The Company has transactions and relationships with affiliates. Although the Company seeks to ensure that these transactions and relationships are fair and reasonable, it is possible that the terms of these transactions are not the same as those that would result from transactions among unrelated parties.

Carlyle Affiliated Entities

The Company maintains investment management agreements with Carlyle affiliates (collectively the "Investment Manager"), pursuant to which the Investment Manager provides certain investment management and advisory services with respect to certain asset classes. The Company recorded expenses related to these agreements of

\$27 million and \$17 million for the years ended December 31, 2023 and 2022, respectively, that are included within net investment income within the consolidated statements of income.

The Company invests in limited partnerships where a Carlyle affiliate is the general partner of the funds managed by Carlyle affiliates. The Company's investments in funds and other structured investments managed by Carlyle were valued at \$2,477 million and \$1,296 million as of December 31, 2023 and 2022, respectively, and were primarily of private credit fixed income assets and limited partnership interests. The Company recorded net investment income related to these investments of \$155 million and \$68 million for the years ended December 31, 2023 and 2022, respectively.

Additionally, as of December 31, 2023 and 2022, the Company held investments originated by Carlyle of \$5,236 million and \$3,211 million, respectively, that are included within funds withheld - directly managed, at fair value within the consolidated balance sheets.

T&D Affiliated Entities

On March 31, 2022, the Company entered into a reinsurance agreement with an affiliate of T&D, through which the Company assumed a legacy block of payout and deferred annuities on a coinsurance basis.

The Company reported assumed policyholder contract deposits and reinsurance payables of \$2,836 million and \$125 million, respectively, as of December 31, 2023 and \$3,500 million and \$144 million, respectively, as of December 31, 2022 in the consolidated balance sheets in connection with this reinsurance agreement. The Company recorded assumed interest credited to policyholder account balances in the consolidated statements of income (loss) in connection with this reinsurance agreement of \$33 million and \$29 million, respectively, for the years ended December 31, 2023 and 2022.

For the year ended December 31, 2023, the Company paid \$8 million to an affiliate of T&D, for a one-time advisory fee paid for assistance with opportunities in the Japanese insurance sector that are included in general operating and other expenses within the consolidated statements of income (loss).

Expense Charges and Allocations

A portion of the Company's expenses are allocations or charges from Fortitude Group Services ("FGS") and Fortitude International Group Services ("FIGS") which are indirect wholly-owned subsidiaries of FGP. These expenses primarily relate to general and administrative expenses which include accounting, actuarial, risk management and data processing services. During the year ended December 31, 2023, the Company was allocated \$25 million and \$15 million of costs for these services from FGS and FIGS, respectively. During the year ended December 31, 2022, the Company was allocated \$43 million and \$11 million of costs for these services from FGS and FIGS, respectively.

As of December 31, 2023, the Company recorded payables of \$21 million and \$6 million to FGS and FIGS, respectively, for invoices not yet settled within other liabilities on the consolidated balance sheet. As of December 31, 2022, the Company recorded payables of \$5 million and \$1 million to FGS and FIGS, respectively, for invoices not yet settled within other liabilities on the consolidated balance sheet.

Intercompany Liquidity Agreement

The Company entered into an intercompany liquidity agreement with FGH and FGP that allows the Company and other affiliates to lend or borrow funds to meet short term liquidity and other capital needs. The Company borrowed \$52 million from FGH in the second quarter of 2023, which was paid off within the same quarter. The Company borrowed \$75 million and loaned \$77 million from FGP and to Fortitude Life Insurance & Annuity Company ("FLIAC"), respectively, in the fourth quarter of 2023. Both loans were paid off within the same quarter. During the year ended December 31, 2023, the Company recorded interest income associated with the loan to FLIAC of less than \$1 million, and interest expense associated with the loans from FGH and FGP of \$1 million within net investment income on the consolidated statements of income (loss).

During the year ended December 31, 2021, the Company loaned \$15 million to FGS to provide short term liquidity which is recorded in other assets on the consolidated balance sheet. FGS repaid the total balance during the third quarter of 2022. During the fourth quarter of 2022, the Company loaned \$75 million to FLIAC. FLIAC subsequently repaid this loan during the fourth quarter of 2022. During the year ended December 31, 2022, the Company recorded interest income associated with these loans of \$1 million within net investment income on the consolidated statements of income (loss).

Affiliated Asset Transfers

The Company may participate in asset transfers with affiliates. Book and market value differences for trades with the Company and affiliates are recognized within Investment gains (losses) on the consolidated statement of income (loss). The table below shows affiliated asset trades for the year ended December 31, 2023, (in millions):

Income tax (expense) benefit		(179)	63	(116)
Balance, December 31, 2023	\$	247 \$	(238)	\$ 9

13. Statutory Requirements

Under the Bermuda Insurance Act, the Company is registered as a Class 4 and Class E composite reinsurance company. The Company is subject to the following statutory reporting requirements.

- 1. Statutory financial statements ("SFS"): The SFS framework is consistent with U.S. GAAP reporting requirements adjusted for prudential filters. These adjustments include the elimination of non-admitted assets not considered admissible for solvency purposes, the inclusion of certain assets and liabilities that are generally off-balance sheet under U.S. GAAP and adjustments for directions or permitted practices by the Bermuda Monetary Authority ("BMA"). The Company has obtained permission under Section 6C of the Bermuda Insurance Act to utilize the following permitted practices within the SFS:
 - To value the funds withheld directly managed, where applicable, and fixed maturity securities investment portfolios pertaining to long-term business at amortized cost rather than fair value;
 - To value the AIL on a book value basis relating to its long-term business, including the impact of said modification to its deferred taxation; and
 - To perform loss recognition testing on a book value basis relating to its long-term business, including the impact of said modification to its deferred taxation.
- 2. Economic Balance Sheet ("EBS"): Under the EBS framework, assets and liabilities are mainly assessed and included at fair value, with the insurer's U.S. GAAP balance sheet serving as a starting point. The EBS also requires insurers to estimate insurance technical provisions, which consist of the Company's insurance related balances valued based on a best estimate liability plus a risk margin. The best estimate liability may be calculated by applying the scenario based approach or standard approach. Under the scenario based approach the discount rate for insurance reserves is based on the yield on eligible assets owned by the insurer as determined under the worst result of eight prescribed stressed conditions. Under the standard approach the discount rate for insurance reserves is a rate prescribed by the BMA.

The Company is subject to capital requirements calculated using the Bermuda Solvency and Capital Requirement ("BSCR") model, which is a standardized statutory risk-based capital model used to measure the risk associated with the Company's assets, liabilities and premiums as valued under EBS. Required statutory economic capital and surplus under the BSCR model is referred to as the enhanced capital requirement ("ECR"), which is the greater of

the BSCR and minimum margin of solvency ("MSM"). The Company is required to calculate and submit a quarterly financial return, inclusive of the ECR, on a quarterly basis and a statutory financial return and capital and solvency return, inclusive of the ECR, on an annual basis. Following receipt of the submission of these returns, the BMA has the authority to impose additional capital requirements if it deems necessary. Upon inception of a large reinsurance agreement in November 2023, the BMA imposed an additional operational risk charge on the Company. As of December 31, 2023 and 2022, the Company met the minimum statutory reporting and capital requirements.

While not specifically referred to in the Bermuda Insurance Act, the target capital level ("TCL") is also an important threshold for statutory economic capital and surplus. The TCL is equal to 120% of ECR as calculated pursuant to the BSCR formula. The TCL serves as an early warning tool for the BMA. If the Company fails to maintain statutory economic capital and surplus at least equal to the TCL, such failure will likely result in increased regulatory oversight by the BMA.

The statutory capital and surplus reported in the Company's SFS as of December 31, (in millions) is detailed below.

	 2023		2022
Statutory capital and surplus	\$ 3,965	\$	1,597

Under the Bermuda Insurance Act, the Company is prohibited from declaring or paying a dividend if it were in breach of their respective minimum solvency margin or liquidity ratio or if the declaration or payment of such dividends would cause the Company to fail to meet such margin or ratio. The Company is prohibited from declaring or paying in any fiscal period, dividends of more than 25% of its total statutory capital and surplus, as set out in its previous year's statutory financial statements, unless the Company files with the BMA a signed affidavit by at least two members of its Board of Directors attesting that a dividend would not cause the Company to fail to meet its relevant requirements. The Bermuda Insurance Act further prohibits the Company from reducing its prior period statutory capital by 15% or more without prior approval of the BMA. As the Company reinsures run-off business, the Company is required to seek BMA approval for any dividends or distributions.

The Company did not declare or pay any dividends during the year ended December 31, 2023. The Company declared and paid dividends of \$750 million to FGH during the year ended December 31, 2022.

14. Subsequent Events

The Company has evaluated the impact of subsequent events through April 29, 2024, the date at which the financial statements were available to be issued and determined there are no additional items to disclose, except for the below transactions.

Effective January 1, 2024, the Company entered into a credit default swap with Fortitude International Ltd. ("FIL"), a direct wholly-owned subsidiary of FGP, whereby FIL provides the Company with protection from economic exposure to credit losses on the outstanding principal of a specific portion of the Company's investment portfolio over a defined period of time.

Effective March 11, 2024, the Company entered into a securitization transaction whereby a portfolio of residential mortgage loans were sold to a special purpose entity in exchange for residential mortgage backed securities of an equal fair value.
